

Chief Operating Officer (COO)

Permanent position, full-time.

What is Force Oncology?

Force Oncology is a challenger in the Tumor Treating Fields (TTFields) market. TTFields is a medical device approach to treating cancerous tumours, approved for brain tumour and lung cancer treatment, with brain tumours alone a \$580M global market today. Currently available products have limited product-market fit and most patients opt out of starting treatment (one representative study found only 36% accepted). By engineering an improved and more mature product, it is likely that more patients will accept treatment and then stick with it for longer, potentially extending their lives. Force Oncology is on a mission to develop the TTFields equipment that extends life the longest and that is preferred by patients. Getting medical devices to market is both a marathon and a sprint, and every day matters as we work to bring improvements to patients. We carry that urgency always. Cancer can't wait.

Operations at Force Oncology

Delivering on the mission we've set ourselves is a tall order, and we need to make sure that we spend our time and resources on the right work at the right time to be successful. As a development-stage company, the day-to-day activities are focused on using available financial, human and technical resources to achieve our R&D, clinical trial and product approval milestones, while maintaining regulatory compliance. If we can cut days, weeks or months from the schedule that makes a tremendous difference.

We work with both internal development resources and external consultants.

What to expect

Force Oncology is still a small organization, with the pros and cons that come with that, but is bent on growing. We are building something new, and it is important that you too are a hands-on problem solver with a strong focus on the mission.

The role includes responsibility for

- Financial Management
- Human Resources
- Product Development Processes
- Regulatory Compliance

Who you are

You have previous experience of similar roles, with exposure to regulated industries, preferably medical devices. You like situations where you can help scale an organisation and your contributions make a real difference.

We look forward to receiving your application at [jobs /at/ forceonco.com](https://jobs.at/forceonco.com).
